Subject: RMP Summary

Susan can we create a summary of the RMP for DuPont based on this example from West? HQ is checking with OGC about a redacted version for release. We need to put in the worst case scenario numbers for chemical name, miles and # people. The Wall Street Journal has requested this information.

David

DuPont La Porte- RISK MANAGEMENT PLAN (2011)

Risk management plans currently developed under the Clean Air Act, describe the ways in which a facility reduces the likelihood of accidental releases of extremely hazardous substances into the air, and its plans for dealing with any accidental releases which may occur.

The risk management plan provided to the Environmental Protection Agency in 2011 by Dupont La Porte is attached, but has been redacted by EPA according to statutory restrictions. However, the following is a summary of the redacted materials as provided for by statute:

The worst case scenario included in the RMP for XXXXX show an air release of the chemical could reach a distance of XX miles. Up to XXXX people could be in the vulnerability zone for this scenario and the types of population could include schools, residences, hospitals, public recreation areas, and commercial and industrial areas.
